Precipitation probability							
<05%	<05%	10%	30%	60%	50%	80%	60%

Forecast for Monday 09 Nov 2020

Weather: Mostly cloudy overnight with areas of mist, fog and low cloud, especially in south and east. Some early brightness likely in the west and worst of low cloud and murk will lift through the morning, but staying cloudy with outbreaks of mainly light rain through the day and still some hill fog, especially over southern slopes. Rain turning heavier and more prolonged in the evening, with perhaps some thundery outbreaks.

Chance of cloud free mountain/hill tops above 600m: 20 or 30% with generally persistent cloud down to 600m, but periods of cloud down to 400m or below, especially early and late in day.

Visibility: Moderate or poor at first, becoming mostly good beneath cloud, but often poor or very poor at height in cloud and only a few kilometres in rain at times.

Meteorologist's View

A rather muggy and damp day, with some heavy rain later. Difficult, rather arduous walking conditions at times.

Recent rainfall: measured at Malham: altitude 375m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
15:00 on Sat 07 Nov 2020	0.2mm	0.2mm	0.2mm

Forecast for Tuesday 10 Nov 2020

Weather: Outbreaks of rain overnight with a good deal of fog and hill fog to start the day, then mostly cloudy with patchy rain, though fog slowly lifting from the lower slopes. A more persistent spell of rain in early evening, but clearing late evening with some clear spells developing, though low cloud and patchy mist likely to reform

Maximum wind: Southwest, turning west for a time, 5-10mph increasing 15mph later

Chance of cloud free mountain/hill tops above 600m: 10% with cloud often down to between 450 and 600m, perhaps 30% chance in afternoon as cloud lifts and breaks a little.

Visibility: Moderate to good beneath cloud but only a few kilometres in rain and generally poor or very poor at height.

Temperature: **Valleys:** Plus 9 rising to plus 12 C
At 600m: Plus 8 C
Freezing level: Above summits.
